## LEGACY APPROACHES CANNOT SOLVE In Modern Chat Compliance and Security

Modern chat conversations are ongoing, persistent and dynamic. These robust communications present complex risk and compliance challenges that neither legacy email archives nor cloud access security brokers (CASBs) can handle in-depth. Consequently, organizations are left with compliance and security blindspots that force organizations to disable valuable features and drive up the cost of compliance.

Not all chat components are captured and archived

1

Message threading for email archives misses context and breaks search

2

Content is not analyzed or is analyzed incorrectly

3

Search-dependent lexicons and “bolt-on” analytics for stored data introduce search and detection latency

4

Archives have no ability to remediate exposed risks

5

Legacy archives have prohibitive storage costs

6

Archives lack a privacy-friendly model for redacting stored sensitive data

7

Lack of a modern review workspace drives inefficiency and costs

8

### IN CONCLUSION

Fully addressing gaps requires a thorough understanding of the gaps and the systems and processes your organization uses to achieve compliance and security goals. Learn what is needed to close the gaps and how Theta Lake’s Modern Chat Compliance and Security solution can help.
